

My mouse was created with the sole purpose of it fitting my own hand. After gathering data from other mice, I came to the conclusion that I needed a mouse that was slightly longer than usual and allowed my hand to have multiple points of contact. The back base of the mouse allows my palm to rest on it while my fingers perfectly lay onto the buttons. The functionality of the final print of the mouse is decent but will hopefully get better over time with use. The lip under the mouse buttons is constantly rubbing and causing unnecessary friction while pushing. Other than that, the mouse turned out great!
